

Experience of the guesthouse Maria Weiss

The Finca LA PAZ, situated above Candelaria is an oasis where it is absolutely quiet. It is the guesthouse of Maria Weiss.

One and a half years ago she installed the GIE-water-activator. The guests are very satisfied with the "healthy water" and spend their holidays in order to take a thorough course of water treatment. Maria Weiss has already been able to tell me some interesting experiences of her guests.

But to mention the cat is especially important. Never before it had approached the swimming pool. No animal voluntarily prefers drinking water with chlorine if it is not necessary. It would rather drink water from a puddle.

The law provides that the water of swimming pools has to be mixed with chlorine, especially in touristic areas. Worried about the complaining of tourists consequently the water is always mixed with too much chlorine.

Chlorine is a poison gas. During the Second World War this gas was used as a weapon and today it is said: "swimming is good for your health". We normally absorb most of the complete spectrum of water quality through the skin. As well as we can be cured by having a bath we can also be damaged seriously by all the substances of bathing water with a bad quality.

Since the change of water the cat of the FINCA LA PAZ has always been drinking the GIE water from the swimming pool as you can see in the following picture.
